

## Flow regulator

### Your benefit

Our selection of water flow regulators provides products of highest quality for your cooling requirements.

### Standard equipment includes:

- Premium brass valves and fittings for high corrosion resistance and long life cycle
- Polyamide sight tubes are for high temperatures and come with a float to measure exact water flow.

The flow regulator unit is available with an option of 2 to 8 channels and has a flow rate of 0 – 8 l/min for each channel.

The flow regulator unit is available with an option of 2 to 12 channels and has a flow rate of 0 – 30 l/min for each channel.

The high temperature flow regulator unit is available with an option of 2 to 8 channels with a maximum temperature of 100 °C respectively high pressure and has a flow rate of 0 – 30 l/min for each channel.
